

GP SEMINAR: COMMON GI ISSUES

Functional gut disorders & Hiatus Hernia

RACGP Activity No. 284183 - 2020-22 Triennium
ACRRM ID: 23939

Thursday 2 September 2021
7.00-8.00pm Webinar
[Registration via Zoom](#)

Chronic constipation and diarrhoea are common reasons for presentation to the GP. Functional gut disorders occur frequently in the community (up to 40% of the general population) and account for poor quality of life for patients. However it is often challenging to manage due to their refractory nature. Hiatal hernia is also a frequent presentation in general practice with a variety of symptoms and treatment options.

PRESENTERS

Dr David Yeo,
Upper Gastrointestinal,
Hepatobiliary and
Transplant Surgeon

Dr Yeo is an Upper GI Surgeon based in Sydney. As well as upper GI surgery Dr

Yeo specialises in hepatobiliary surgery, transplant and bariatric surgery. He has a broad special interest and expertise in cancerous and non-cancerous conditions including liver tumours, biliary/gallbladder and pancreatic tumours. He also offers a full range of surgical treatments including laparoscopic (keyhole) surgery for gallstones, hernias, and bariatric/obesity surgery as well as endoscopy and ERCPs.

Dr May Wong,
Gastroenterologist

Dr Wong is a gastroenterologist from Sydney. She has a broad range of interests in gastroenterology. She investigates and manages all gastroenterology conditions

including functional gut disorders, bowel cancer screening, liver disease and inflammatory bowel disease.

She has a passion for research and evidence based care. She completed her PhD at the University of Sydney looking at a novel agent in chronic disease in 2020. Her research has been presented both nationally and internationally and has led to multiple peer reviewed publications.
